## MONTHLY STORM WATER BMP INSPECTIONS FOR RY 20\_-20\_

Instructions: Conduct inspections monthly from July to June. Initial and date each inspection. Mark yes (Y), no (N), or not applicable (NA) to your site. Items marked "N" requires explanation and resolution to planned corrective action on the back side of this form. Annotate discrepancies noted during inspection with date discovered, corrective action, and date corrective action completed. If a storm is predicted items 1 through 6 should be inspected again and corrected before (if possible) or during the start of the rain event. Retain this form onsite for a minimum of 5 years.

MONTHLY STORM WATER BEST MANAGEMENT PRACTICES (BMPs) INSPECTIONS:		Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun
Initial and date/time monthly inspection completed												
Check items 1-6 before or at start of each storm (mark date of pre-storm inspection)												
1. Is the site swept regularly and clean? Hosing down the site is prohibited.												
Sweep again prior to forecast storms whenever possible.												
2. Vehicles/equipment/material/work areas checked for leaks daily?												
3. Are current leaks with drip pans or spill residue cleaned up with absorbent materials and dry cleaning methods?												
Prior to storms move leaking equipment indoors or place and secure tarps over equipment and associated spill pans. Sweep up and containerize absorbent materials.												
4. Conduct aircraft, vehicle, and equipment maintenance indoors whenever possible.												
5. Place 55-gallon drums that can't be moved to accumulation site onto containment pallets.												
6. Are wastes and recyclable materials placed in properly closed and leak-free containers?												
7. Is there a copy of your SWPPP on site and is this copy the most current?												
<ol> <li>Were unauthorized non-storm water discharges reported and eliminated? Stop them or report to PWD or EMD for assistance.</li> </ol>												
9. Are aircraft, vehicles and equipment only washed at EMD-approved wash racks?												
10. Are materials lockers and hazardous waste accumulation sites locked when personnel are not present? Are containment valves closed?												
11. Are personnel trained on proper material handling, fueling, cleaning, and maintenance procedures, BMPs, and spill prevention, mitigation, and cleanup procedures?												
12. Are hazardous substance containers labeled?												
13. Are fuel transfer operations monitored and is topping off tanks prohibited?												
14. Are spill kits present and are the contents acceptable?												
15. Are industrial materials stored within building or covered area whenever possible?												
16. Are oil filters drained and are fluids drained from salvaged vehicles and equipment?												
17. Are site-specific BMPs completed?
